MADE IN DENMARK
..designed for the world!

NARROW WORKING WIDTH

Down to 1400 mm.

HYDRAULIC SWING

Hydraulic angle adjustment

QUICK MOUNTING

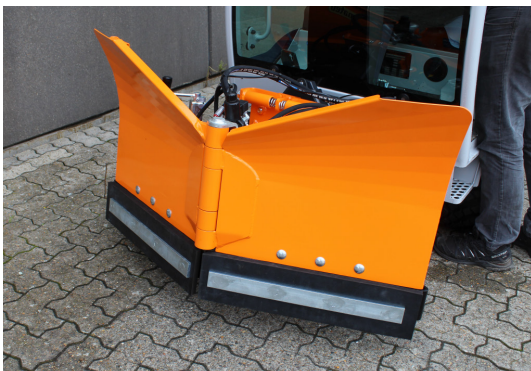

Standard A-frame

The V-plow is equipped with a double spring blade that effectively protects against hitting uneven surfaces

The horizontal oscillation ensures that the blade follows the ground on smaller slopes and in changing terrain

The compact design also allows other driving styles in hard-to-reach places and in narrow passages

V-PLOW

VITRA C2-SERIES | RED2880 / RED2882

The compact V-plough is powerfully built and easily handles clearing tasks of up to 40 cm. Snow.

The individually hydraulically adjustable side wings leave the soil perfectly cleared and, depending on the subsoil, the plow can be equipped with rubber, plastic or steel shares.

The plow works stably even at high speeds, with the associated skids ensuring an optimal result with minimal wear.

The short installation length on the Vitra ensures exceptional and safe driving.

MODEL	RED2880
Height:	670 mm.
Working width:	1300 mm.
Working width - Angel (26°):	1170 mm.
Weight:	150 Kg.

MODEL	RED2802
Height:	670 mm.
Working width:	1640 mm.
Working width - Angel (26°):	1480 mm.
Weight:	180 Kg.
