MADE IN DENMARK
..designed for the world!

LARGE WORKING WIDTH

With suction strength spread evenly

EFFECTIVE COLLECTION

But protects the foundation

QUICK MOUNTING

Standard A-frame

therefore be installed on a variety of machines.

The suction head effectively collects leaves from the pitch without removing granulate from the bottom of the field.

The hydraulic rolling brush carefully evens out the filling material, to leave the field good-looking and even..

LEAVE COLLECTOR

VITRA C-SERIES | LC1000

Cleaning artificial turf is not a big challenge, but doing so without the filling material being picked up is different, and that is where the LC1000 comes into the picture!

The pick-up front is made to effectively collect leaves and dirt from fields, and thanks to its specially designed suction head, leaves and dirt lying on the surface of the field is effectively removed without the granulate of the artificial turf being picked up.

The rolling brush effectively evens out the granulate, so the field stays clean and even.

The front is combined with the Vitra grass collector or the Vitra suction sweeper.
